## EDITORIAL NOTE

The INDEX offers a classified bibliography of all original publications dealing with the problems of consciousness and behavior which have appeared during any one year. An international board of cooperating editors insures a high degree of completeness in the bibliography. Offprints of magazine articles are not noted where the original sources are accessible to the compilers. No titles dated subsequent to the year covered by the INDEX are included, but titles antedating that year will be given when not previously published in the INDEX.

The cooperation of authors and publishers is requested in sending to the editor a careful description of books and articles for future issues, and also in noting errors and omissions. Accuracy and uniformity are sought in the wording of *title, journal or publisher, volume or place of publication, and pagination.* In the interests of uniformity and ease of reference, it is hoped that the editors of all psychological journals will adopt the system of reference citation used by the INDEX and the PSYCHOLOGICAL ABSTRACTS.

The classification of titles in a general bibliography is a task which cannot be adequately performed without printing a given title under more than one heading of the classification. This results from the fact that most titles concern more than one topic. The cost of publication makes a duplication of titles impracticable, and the editors are thus constrained to place a given title under the heading which seems most directly concerned. As an aid to the reader a few cross references are given (see *Contents*, below) from one classification to those others which include highly relevant material. In securing from the INDEX a complete list of publications bearing upon a given topic, the reader must be guided largely by his technical knowledge of the relationships between the various parts of the classification scheme.

The classification scheme of the present volume includes one new sub-group in the section on CHILDHOOD AND ADOLESCENCE, viz., XI: 4, b, *Motor Processes.*
